Continuation of 2. NOTE: The proposed amendment introduces the new claim of "A computer program, stored in a tangible storage medium, for providing a man-machine interface for controlling network devices, the program comprising executable instructions that cause a computer to: determine a connection of one or more devices to a network; determine availability of one or more multimedia services available via one or more devices connected to the network; and display a hierarchical view representative of said one or more devices connected to the network and said one or more available multimedia services". Addition of this new claim appears to raise issues under 101 and would therefore require further consideration. Furthermore, the applicant argues, in the reply filed on 6 October 2004, that although the cited prior art of record (Windows Explorer) shows a hierarchical view of the files, directories, and devices connected to a computer, it fails to teach or suggest controlling network devices by determining which devices and multimedia services are available and connected to a network." However, the claims referenced by the applicant do not positively recite controlling the network devices. The recitation of "controlling network devices" has not been given patentable weight because the recitation occurs in the preamble. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See In re Hirao, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and Kropa v. Robie, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).
